System 8000 StrainSmart® Data Acquisition System

FEATURES

- Eight software-selectable input channels
- Up to 16 scanners can be used concurrently
- Supported inputs include:
  - Strain gage (quarter-, half-, and full-bridges)
  - Strain-gage-based transducer
  - High-level voltage signal
  - Thermocouples
- RJ45 input connectors for each input channel
- Scanning rates are 1000, 500, 200, 100, and 10 samples/second
- Compact size and ruggedized enclosure
- Ethernet network architecture
- Optional self-calibration functionality available

DESCRIPTION

System 8000 from Micro-Measurements is a versatile, precision data acquisition instrument system intended for static and dynamic test and measurement applications. The system includes a scanner with 8 channels of data acquisition. A 10’ crossover Ethernet cable is also included. The scanners may be used separately or up to 16 scanners can be used concurrently for a maximum of 128 channels.

Each channel can be configured, via software, to accept signals from strain gages or strain-gage-based transducers, thermocouples, or high level voltage sensors. Strain gage channels accept full-, half-, or quarter-bridge configurations and have the required bridge completion components for 120-, 350-, and 1000-ohm bridges. Each scanner operates independently; multiple scanners are not synchronized.

The data is processed in a modern 24-bit digital signal processor and filtering is performed using Finite Impulse Response (FIR), multi-stage filters. This provides excellent noise rejection and stability and unsurpassed measurement accuracy.

The Model 8000-8-SM Scanner communicates with a host personal computer (PC) via an Ethernet connection. Micro-Measurements StrainSmart® software is optimal for configuring, controlling, and acquiring data from the System 8000. A Programmer’s Reference Kit provides documentation, programming examples, and instrument drivers to assist with custom software development.

SUPPORTED SENSORS

Each channel can be defined, via software, to be one of the following sensor types:
- Strain gage (quarter-, half-, and full-bridges)
- Strain-gage-based transducer
- High-level voltage signal
- Thermocouples

SAMPLING

All channels in each scanner are sampled simultaneously. Each channel’s 24-bit analog-to-digital converter oversamples data at a rate of 128k samples/second, and provides high quality, low noise data (without the need for signal averaging) at rates up to 1000 samples/second/channel.

SCANNING RATES

The system provides numerous scan rates and Finite Impulse Response (FIR) filters are automatically selected to provide suitable filtering at each rate to avoid aliasing. Sampling rates for the Model 8000-8-SM are 1000, 500, 200, 100, and 10 samples/second.

COMPACT, RUGGEDIZED ENCLOSURE

The Model 8000-8-SM has 8 channels in a 1U (1.72 inch) height enclosure. The aluminum-alloy enclosure provides superior strength and durability. A rack mount kit is also available.

RJ45 INPUT CONNECTORS

Each channel input connector is an 8-pin TIA/EIA RJ45.

RELAY OUTPUT

A relay output is provided to control external hardware.

ETHERNET NETWORK ARCHITECTURE

The system communicates over an IEEE-802.3u 100Base-TX or an IEEE-802.3 10Base-T Ethernet Network. The firmware uses separate command and data ports and employs a reliable TCP-based protocol to prevent data loss.

DC OPERATION

Model 8000 operates on 10-32 VDC power. This can be from the included power supply or by using a separate AC-to-DC converter or DC supply such as a battery.

MODEL 8000-8-SM POWER SOURCE

The Model 8000 is a DC-powered instrument. The system accommodates DC input voltages from 10 to 32 volts. The included power supply provides the required AC-to-DC conversion and up to 30 watts of power to the system. An alternate DC power source can be used provided that it supplies enough power to meet the...
System 8000

System 8000 StrainSmart® Data Acquisition System

system and excitation power requirements. The total system power requirements are highly dependent upon the power requirements of the bridge excitation circuitry. At a minimum, the instrument requires approximately 17 watts of power. A fully loaded instrument employing the maximum excitation current requires up to 26 watts of power.

ENCLOSURE
The Model 8000-8-SM enclosure is constructed of aluminum alloy. The enclosure is designed to provide superior strength, durability, and to minimize RF emissions and susceptibility.

A123 SYSTEM VOLTAGE CALIBRATION CARD (OPTIONAL)

The Micro-Measurements A123 System Voltage Calibration (VCAL) Card is available as an accessory and provides the ability to perform a system-level calibration of the entire measurement circuit without the need to return the system to the manufacturer or metrology lab. The gain and offset of each channel can be calibrated. The A123 is calibrated at the factory to NIST-traceable standards and does not need to be present in the system during normal operation. A benefit of on-board system calibration is the ability to calibrate the system under the actual operating conditions, thereby minimizing errors due to environmental conditions.

SPECIFICATIONS—GENERAL
All specifications are nominal or typical at +23°C unless noted. Performance may be degraded in the presence of high-level electromagnetic fields. For CE compliance, Micro-Measurements recommends that all cables be limited to 30 meters in length.

Environmental
Temperature: 0° to +50°C
Humidity: Up to 90%, non-condensing

Enclosure
Material: A356-T6 aluminum casting
Dimensions (all dimensions are nominal):
1.72 H (1.96 with feet) x 11.0 W x 10.18 D (10.55 including power connector) inches
(43.68 x 279.4 x 258.66 mm)
Configurations:
Bench-top, stackable, rack-mountable.

Weight
3.85 lbs (1.75 kg)

Power
Input: 10-32 VDC, 5A max.
Fuse:
5A Fast-acting blade terminal. (Littlefuse FUN MINI® PN 125.6785.4502 or equivalent)
Power Switch:
Rocker switch with green LED to indicate power on.

Relay
Quantity: One
Configuration: NO and NC, 500 mA relay contact

Communication
Ethernet Interface: IEEE 802.3 10Base-T, 802.3u 100Base-TX, half- and full-duplex, auto-detect. RJ45 connection, green LINK/ACT LED

A123 Voltage Calibration Card
Accuracy:
±100 ppm repeatability, typical
±250 ppm repeatability, maximum
Drift:
1.9 ppm/°C ±0.6 μV/°C typical
9.4 ppm/°C ±2.1 μV/°C maximum
Resolution: 150 μV nominal
Voltage Range: ±5V

ANALOG CHANNELS

Channels
Eight, differential inputs

A/D Converter
Quantity: Eight (one per channel)
Architecture: Delta-Sigma (ΔΣ)
Resolution: 24 bits
Oversampling Rate:
128k samples/second/channel (max)

Data Rates
1000, 500, 200, 100, or 10 samples/second/channel

Analog Anti-Alias Filter
Type: Low-pass
Frequency: 500 Hz @ –3 dB
Number of Poles: One
Topology: Lowpass RC

Processor
Type: 32-bit floating point Digital Signal Processor
300 MHz operating frequency

RAM
Type: SDRAM
Size: 32 MB

Flash
Type: Serial NOR
Size: 1MB (user)
Digital Filters

Type: Two-stage Finite Impulse Response (FIR)

System Calibration

Firmware-controlled

Calibration Voltage

Supplied by Model A123 voltage calibration card

Type: Multi-point, ≥100 samples per point

### STRAIN GAGE INPUTS

**Channels**

Up to 8 per scanner

**Inputs**

Software selectable for S+/S-, Vcal+/Vcal-, or excitation

**Strain Gage**

1200, 3500, 10000 quarter-bridges; 600 to 50000 half- and full-bridges

**Input Impedance:** 220 MΩ nominal each input

**Source Current:** ±5 nA per volt excitation

**Measurement Range and Resolution**

**Range:** Depends upon excitation setting (see Table 2)

**Resolution:** 0.5 με @ GF=2 (0.25 μV/V)

* NOTE: Range calculations at zero volts excitation are based upon 1 volt excitation, and are typically used for the quantification of self-generating noise.

**Input Connector**

8-pin TIA/EIA RJ45 (MM Part No. A106, Tyco AMP type 554739 or equivalent)

Use of a crimping tool is recommended (MM Part No. A108, Tyco AMP Model No. 3-23-1652-0, or equivalent). Crimping tool can be used on both shielded and non-shielded connectors.

**Amplifier**

**Zero Temperature Stability:**

\( \pm 1 \mu V/^\circ C \) RTI, after 60-minute warm-up

**DC Gain Accuracy and Stability:**

\( \pm 0.05\% ; \pm 50 \text{ ppm}/^\circ C \) (1 year without periodic VCAL)

**Analog Input (including Full-Scale balance):**

**Low Range:** \( \pm 38 \text{ mV} \)

**High Range:** \( \pm 155 \text{ mV} \)

**Linearity:** \( \pm 0.02\% \) of Full Scale

**Common-Mode Rejection:**

\( >90 \text{ dB (DC to } 60 \text{ Hz)} \)

**Common-Mode Voltage Range:** \( \pm 12 \text{V typical} \)

**Balance**

**Type:** Software (mathematical)

**Range:**

Full ADC Range (actual balance level shifts dynamic measurement range 1:1)

**Excitation**

**Selection:** Software controlled

**Unipolar:** 0 to \( +10 \text{ VDC} \)

**Resolution:** 3 mV

**Accuracy:** \( \pm 10 \text{ mV typical} \)

(Firmware measures excitation variations during arming process)

**Current:** 50 mA max per channel

Over-current limited

Over-current indication

**Load Regulation:** \(<0.05\% \) of Full Scale for 10% to 100% of Full Scale loads with remote sense

**Temperature Stability:** \( \pm 10 \text{ ppm}/^\circ C \)

**Quarter-Bridge Completion**

**Selection:** Firmware-controlled

**Accuracy and drift:**

1200Ω and 3500Ω: \( \pm 0.01\% , 2.8 \text{ ppm}/^\circ C \) max.

1 kΩ: \( \pm 0.01\% , 1.6 \text{ ppm}/^\circ C \) max. (Socketed)

**Shunt Calibration**

**Selection:** Firmware-controlled

**Configuration:**

**Internal:** P– to D120, P– to D350, P– to D1000

**Sockets:** Tin-plated

**Levels:** Simulates 10000 με @ GF = 2.0
System 8000 StrainSmart® Data Acquisition System

Values:
- P– to D120: 5940Ω ±0.1%
- P– to D350: 17325Ω ±0.1%
- P– to D1000: 49500Ω ±0.1%

THERMOCOUPLE INPUTS
Channels:
- Up to 8 per scanner
Inputs
- Supported thermocouple types: J, K, T, E, N, R, S, B
- Cold-junction compensation, software-selectable
- Open-sensor detection
- Input Impedance: 22 MΩ nominal each input

Input Connectors
- Eight-pin TIA/EIA RJ45

Amplifier
- Zero Temperature Stability: ±2 μV/°C RTI, ±10 μV/°C RTO, after 60-minute warm-up
- DC Gain Accuracy and Stability: ±0.1%; ±30 ppm /°C
- Linearity: ±0.02% of Full Scale
- Common Mode Rejection (DC to 60 Hz): >90 dB
- Common Mode Voltage Range: ±12V typical

Measurement Ranges and Resolution
- Range: ±77.5 mV
- Resolution: 1°C minimum

Accuracy
- ±2°C (nominal)

HIGH-LEVEL INPUT
Channels
- Up to 8 per scanner
Inputs
- Differential
  - Input Impedance: 220 MΩ nominal each input
  - Input Bias Current: ±0.5 nA typical (±2 nA max.)
- Eight-pin TIA/EIA RJ45 (MM Part No. A106, Tyco AMP type 554739 or equivalent)
- Use of a crimping tool is recommended (MM Part No. A108, Tyco AMP Model No. 3-23-1652-0, or equivalent). Crimping tool can be used on both shielded and non-shielded connectors.

Amplifier
- Zero Temperature Stability: ±2 μV/°C RTI, typical, ±10 μV/°C RTO, after 60-minute warm-up
- DC Gain Accuracy and Stability: ±0.1%; ±30 ppm /°C
- Linearity: ±0.02% of Full Scale
- Common Mode Rejection (DC to 60 Hz): >90 dB
- Common Mode Voltage Range: ±12V typical

Excitation
- Selection: Software controlled

Unipolar Mode:
- Range: 0 to +11.997 VDC
- Accuracy: ±10 mV typical
- Current: 50 mA max. Over-current/over-temperature protected
- Load Regulation: <0.05% of Full Scale (unipolar mode) for a load variation of 10% to 100% of Full Scale loads (with remote sense)
- Temperature Stability: Better than ±30 ppm/°C

Bipolar Mode:
- Range: ±12 VDC (24 VDC total)
- Accuracy: ±5% of Full Scale
